

# **Implementasi VPN WireGuard untuk Secure Remote Access**

## **Kelompok 7 - Topik 7**

1. Janumelah - 2201020048
2. Mohd Allifyan Baitul Nesam - 2201020023
3. Anjas Revaldo - 2201020108
4. Safitri Wulandari - 2201020085
5. Danish Arya Yudhistira - 2201020110
6. M. Aditya Egi Dwi Nata - 2201020141

## **Minggu: 1**

Pada minggu 1 dilakukan tahap awal setup lingkungan percobaan VPN dengan membuat dua sistem operasi Linux menggunakan VMware Workstation, masing-masing berperan sebagai:

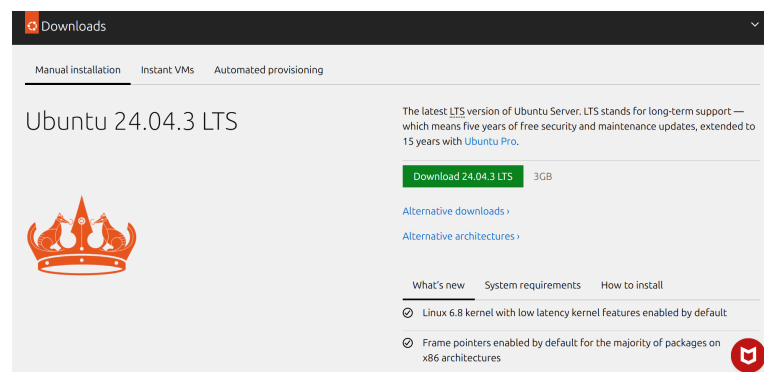

- a. Server akan dipasang WireGuard.
- b. Client akan terhubung ke server VPN.

Tahapan dan Proses:

### 1. Mengunduh file ISO Linux (Ubuntu Server dan Client)

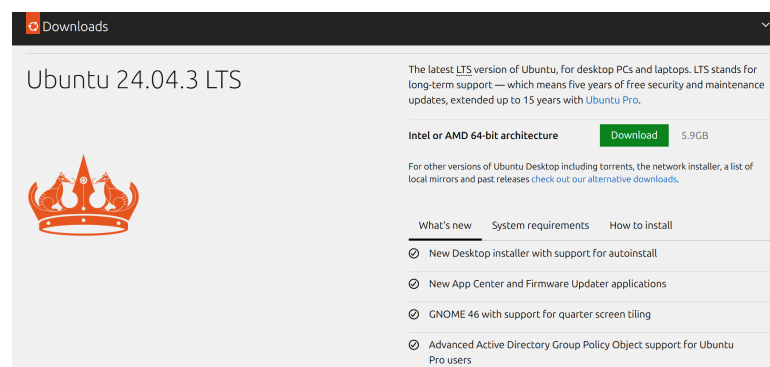

Tahap ini dilakukan untuk memperoleh file instalasi sistem operasi Ubuntu yang akan digunakan sebagai server dan client pada proses konfigurasi. Pada halaman resmi Ubuntu, terdapat dua jenis ISO yang diunduh:

#### a. Ubuntu Server 24.04.3 LTS

ISO ini digunakan untuk kebutuhan server karena menyediakan lingkungan minimal dan fitur yang sesuai untuk layanan jaringan serta administrasi sistem.

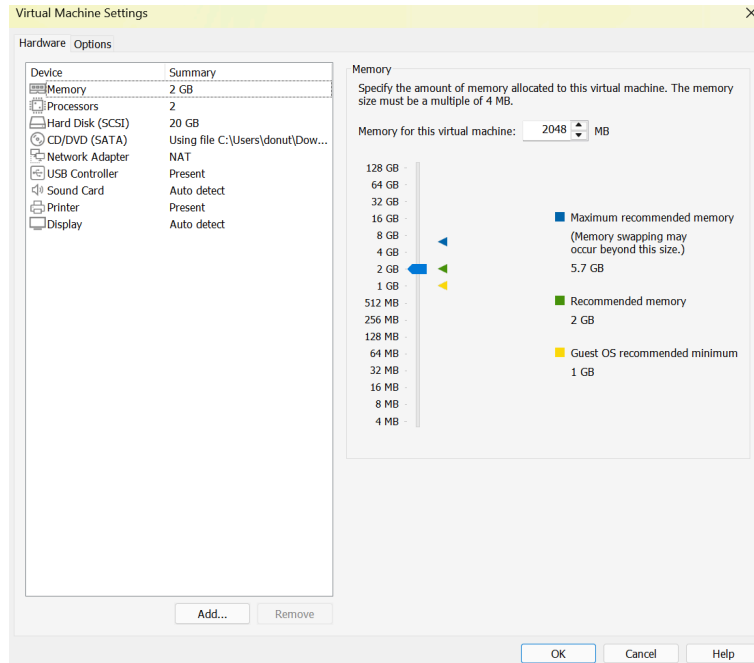

#### b. Ubuntu Desktop 24.04.3 LTS

ISO ini digunakan sebagai sisi client, menyediakan antarmuka grafis

(GUI) sehingga proses pengujian dan interaksi lebih mudah.

## 2. Membuat dua VM (Virtual Machine) dengan spesifikasi minimal

Pada tahap ini dilakukan pengaturan spesifikasi perangkat keras virtual untuk kedua VM, yaitu Ubuntu Server dan Ubuntu Client. Penyesuaian dilakukan melalui menu virtual machine settings pada VMware. Berdasarkan gambar di atas, VM Server dikonfigurasi dengan spesifikasi sebagai berikut:

### a. Memory (RAM): 2 GB

Jumlah memori yang cukup untuk menjalankan layanan dasar Ubuntu Server.

### b. Processors: 2 core

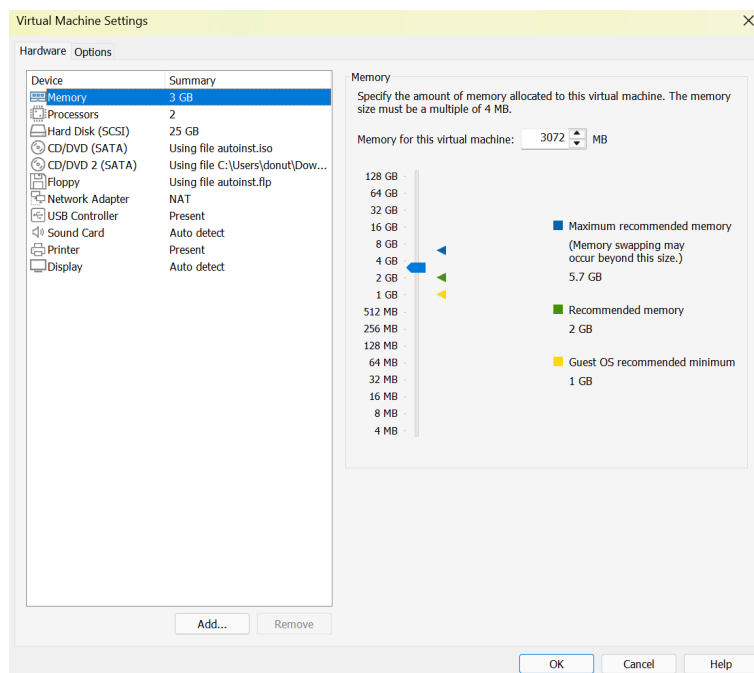

Memberikan performa yang lebih stabil untuk proses server.

### c. Hard Disk: 20 GB

Kapasitas penyimpanan minimal untuk sistem operasi dan instalasi layanan tambahan.

### d. Network Adapter: NAT

Menggunakan mode NAT agar server dapat terkoneksi dengan jaringan melalui IP host.

Pada gambar di atas, VM Client mendapatkan spesifikasi yang sedikit lebih tinggi karena menggunakan Ubuntu Desktop dengan antarmuka grafis (GUI):

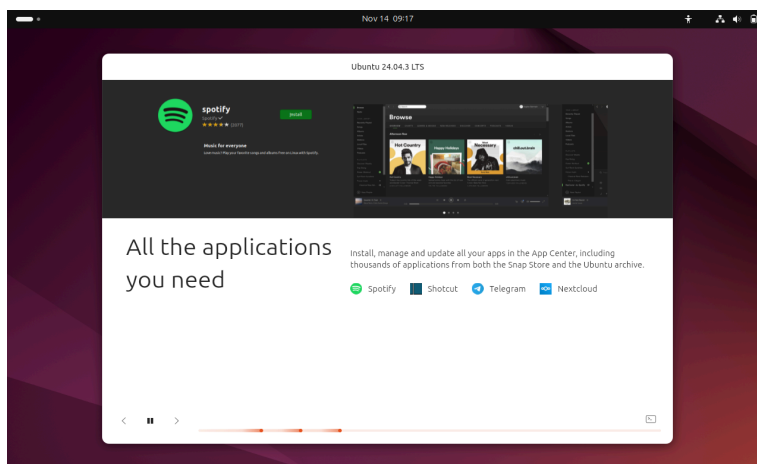

- a. Memory (RAM): 3 GB  
Menyediakan memori tambahan untuk mendukung lingkungan desktop.
- b. Processors: 2 core  
Memberikan kelancaran saat menjalankan aplikasi GUI.
- c. Hard Disk: 25 GB  
Kapasitas lebih besar untuk menampung aplikasi dan kebutuhan pengguna.
- d. Network Adapter: NAT  
Memungkinkan client memperoleh akses jaringan melalui host.

### 3. Melakukan instalasi sistem operasi Linux pada kedua VM

finish: subiquity/network/send_update: DMDEG error3
```

Pada gambar pertama, instalasi Ubuntu Server dilakukan melalui mode teks (terminal). Tahapan yang terlihat pada screenshot antara lain:

- Ekstraksi file instalasi ke disk VM.
- Instalasi paket inti (core system packages).
- Konfigurasi layanan sistem seperti network service.
- Instalasi kernel Linux.
- Persiapan sistem untuk reboot pertama setelah instalasi selesai.

Gambar di atas menunjukkan proses instalasi Ubuntu Desktop pada VM client. Tampilan installer menunjukkan:

- Pengenalan fitur-fitur Ubuntu (App Center, aplikasi-aplikasi populer).
- Proses instalasi berjalan di background.
- Menunggu hingga instalasi sistem selesai sepenuhnya.

#### 4. Melakukan ping pada kedua sistem

```
Welcome to Ubuntu 24.04.3 LTS (GNU/Linux 6.8.0-67-generic x86_64)

applicable law.

To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

ubuntu@server01:~$ ping 8.8.8.8
PING 8.8.8.8 (8.8.8.8) 56(84) bytes of data:
64 bytes from 8.8.8.8: icmp_seq=1 ttl=255 time=10.5 ms
64 bytes from 8.8.8.8: icmp_seq=2 ttl=255 time=7.32 ms
64 bytes from 8.8.8.8: icmp_seq=3 ttl=255 time=6.7 ms
64 bytes from 8.8.8.8: icmp_seq=4 ttl=255 time=8.44 ms
64 bytes from 8.8.8.8: icmp_seq=5 ttl=255 time=10.2 ms
64 bytes from 8.8.8.8: icmp_seq=6 ttl=255 time=7.22 ms
--- 8.8.8.8 ping statistics ---
6 packets transmitted, 6 received, 0% packet loss, time 5006ms
rtt min/avg/max/mdev = 7.216/14.097/45.710/13.030 ms
ubuntu@server01:~$
```

Pada gambar di atas terlihat bahwa perintah ping 8.8.8.8 dijalankan pada sistem pertama. Hasil pengujian menunjukkan adanya reply dari host tujuan. Hal ini menandakan bahwa:

- Sistem pertama sudah memperoleh konfigurasi jaringan yang valid.
- Sistem dapat berkomunikasi keluar jaringan (akses internet tersedia).
- Tidak terdapat packet loss selama pengujian.

```
Nov 14 10:05

```

Pada gambar di atas, sistem kedua juga menjalankan perintah ping 8.8.8.8 dan memperoleh hasil reply yang sama. Setelah pengujian ping, ditampilkan pula hasil perintah ip a yang menunjukkan:

- Interface jaringan dalam kondisi aktif.
- Sistem telah menerima alamat IP secara dinamis.
- Rute jaringan dan konfigurasi interface berfungsi dengan baik.

Hasil:

1. Dua mesin Linux berhasil dibuat dan terkoneksi ke jaringan internal VMware.
2. Sistem dapat saling ping, menandakan konektivitas awal sudah siap.
3. Lingkungan siap digunakan untuk instalasi WireGuard pada minggu ke-2.
